EDUCATION

Columbia University

Master of Science in Artificial Intelligence, AI Infrastructure track

New York, NY

Sep 2026 – Dec 2028 (expected)

National Central University

Bachelor of Science in Computer Science and Information Engineering

Taoyuan, Taiwan

Sep 2022 – Jun 2026

- Presidential Award (Top 5% of Class), Fall & Spring Semesters, Freshman Year
- Dean's Award (Top 10% of Class), School of Management, 2023

EXPERIENCE

Garmin — Software Engineering Intern

Jul 2025 – Jun 2026

APAC B2B team, IT / Internet

New Taipei City, Taiwan

- Independently delivered 43 development tickets (~620 logged hours) across 15 project lines serving 8 APAC markets, owning each end-to-end through design, peer review, testing, and change-request deployment to production.
- Contributed to re-architecting three legacy monoliths (POS, warranty engine, dealer order portal) into decoupled Vue + Spring Boot services, including a role-based dashboard with JWT access control scoped to each user's authorized regions.
- Drove a platform-wide Java 8→21 / Spring Boot 3 migration with OpenRewrite-automated refactoring; integrated ELK, OpenTelemetry, and Sentry for centralized logging and error tracking across 9+ services (15 instances in 7 countries).
- Optimized a high-traffic payment service via HikariCP connection pooling, single-read configuration injection, a shared ObjectMapper, and Redis caching on hot read paths.

Research Assistant — Department of Mathematics, National Central University

Jul 2023 – Jun 2025

- Co-led a four-person team (planner, artist, programmers) building an educational math game in Unity that generates problems dynamically tailored to each student's skill level.
- Responsible for core gameplay features and the overall software architecture.

beBit TECH — Engineering Intern

Jul 2024 – Aug 2024

- Analyzed 1M+ customer purchase records with Python and pandas; built a scikit-learn revenue prediction model that improved forecasting accuracy by 22%, presenting insights to product managers to support sales decisions.
- Developed an AI customer-service chatbot with web scraping and Google's Gemini LLM, automating responses over a product database.

PROJECTS

NCU APP | React, TypeScript, Supabase, Tailwind CSS, Docker

Mar 2023 – Present

- Student-led campus app streamlining access to university services and event information.
- Led the development team designing and implementing event creation and management features.

SKILLS

Programming Languages: Java, TypeScript, Python, JavaScript, C/C++, C#, SQL

Frameworks: Spring Boot 3, Vue (Pinia), React, Node.js, Unity

Infrastructure & Data: Kubernetes, Jenkins, Docker, ELK, OpenTelemetry, Sentry, Redis, Airflow, pandas, scikit-learn

Languages: Mandarin (native), English (professional), Japanese & Korean (basic proficiency)
